Ido Leshkowitz, Frontend Developer

Hi, I'm Ido, a junior software developer with a background in the culinary arts. I began my professional journey at the age of 15 as a cook, but have since made a deliberate shift towards software development. My experience has taught me that both cooking and coding require persistence, problem-solving skills, and a passion for creating something unique and valuable. I am eager to bring these skills to a new challenge and grow as a software developer.

Employment History
